

Code 4 Technologies Microsoft Defender for Business Workshop

Introduction

Security for all - Big organization security solution without the big org price.

This document "Service Description" describes the Code 4 Technologies workshop being provided to you "Client" by Code 4 Technologies.

Description of workshop

Code 4 Technologies workshops are worthwhile investments. We help heighten the security posture by finding health and hygiene practices that need to be addressed and security processes that should be automated to improve the time to detection, containment, and eradication. We ensure that Client maximizes the full value of the Client's Microsoft Defender for Business security products by identifying areas that would benefit from further optimization and can be automated and streamlined to reduce costs and resource requirements.

Code 4 Technologies provides options for improving overall security and reducing risk. When coupled with our Managed Services, they can assist in planning both an IT roadmap and a path to business outcomes.

Microsoft Defender for Business workshop overview

Our Microsoft Defender for Business workshop helps busy clients understand how to maximize the capabilities and value of their Microsoft 365 Business Premium investments.

Our two hour workshop helps security professionals to:

- Hear about the common challenges SMBs face as they try to keep their networks and most valuable data assets secure.
- Learn about the real and growing risk of falling victim to a cyberattack.
- Dive into a demo experience designed to help you think about cybersecurity both practically and from a holistic point of view.
- Conclude with a group discussion and answer any key questions

Client requirements

Microsoft Defender for Business SMB pre engagement questionnaire is required to be completed prior to scheduling the workshop.
